15	2023-02-15	Leonard Fischer, Niko Malliaros	Everyone else	Tobias Benjamin Wittig	Julian Rosenberger	Retrospective

Goals	Valuable product that the company could make use of - the product being the result of a collaborative effort
	No one is left behind
Meeting norms	Focus and concentration
	Meetings are mandatory, if unavailable excuse early
	Be on time at 12:15 on Wednesdays
	Turn camera on (at least) while talking (except for technical issues)
Working norms	Criticism and reviews should be given in the team meetings
	Weekly contribution (a possible exception like holidays, private matters, etc.)
	Working at a durable steady pace, minimize the unspecified work
	Features are voluntary picked up by SDs, not assigned
	If SD cannot complete task within deadline, he must let others know ASAP (in Discord)
Coordination norms	Product Owners lead the Team Meetings and keep Team on track, Product owners prioritize the work load (tickets)
	Assign each task to a specific person; make sure they know what has to be done; PO make sure people are on track
	Work division in Team Meeting
Communication norms	Openness
	Discord - different channels for separate matters; try to forewarn about the absence so that work can be divided
	E-mail is used for communication with industry partner (cc: amos-team4@group.riehle.org)
	Make use of Stand-up-Emails :-)
	No Interrupting
Consideration norms	If disagreements appear, handle by public voting discuss together
Cont. improvement norms	Commitment
	The teams progress will be tracked through weekly updates during the meetings
	When someone is inactive, reach to him, if this does not solve the problem, have discussion with the team and decide how to proceed
	Feedback
	Reflect together on how to improve: Retrospective Phase in Team Meeting :)
Rewards	We celebrate each others successes and value outstanding commitment
Sanctions	Violating the group norms should be fined by making the member apologise to each of his teammates publicly
Signatures:	Leonard Fischer, Tobias Wittig, Kevin Nguyen, Kubilay Eren, Georgi Kotsev, Nikolaos Malliaros, Julian Rosenberger, Dawid Niezgódka, Duc Thai Vu

Product Vision	Project Mission
<p>The development partnership AUTOSAR, consisting of several hundred member companies, establishes and provides standards for software, exclusively for automotive electronic control units. These standards are, for example, represented in the form of specification documents that contain technical requirements. The firm Develop Group is working with these documents and claims that the practical handling of them has potential to be facilitated. The objective of the "AMOS SpecItem project" is to provide the possibility to easily search, edit and compare the technical requirements present in the specification documents. This is realized with a specially created database whose content can be accessed in an interactive UI. The overall usability of the system is enhanced by its accessibility through communication protocols. Users of this solution benefit from an enormous facilitation in maintenance of the requirement items.</p>	<p>Maintaining SpecItems is simplified by creating an online database with a browser-based frontend. The user is able to view the SpecItems in the browser. They can also search for specific SpecItems. Moreover, the user can change SpecItems in the web browser.</p> <p>So in other words the database (service) shall allow to:</p> <ul style="list-style-type: none"> - import new revisions of SpecItems from input files - search and view SpecItem data in web-browser - compare revisions of a SpecItem - edit specific SpecItem metadata in web-browser - export SpecItem data to output files - trigger the actions above by REST API.

[illegible]

Burndown Chart

A bar chart titled 'Burndown Chart' comparing 'Real Burndown' (blue bars) and 'Est. Burndown' (red bars) across 6 iterations. The Y-axis represents a value from 0 to 100 in increments of 25. The X-axis represents iterations from 1 to 6. Real Burndown is only shown for iterations 1 and 2, while Est. Burndown is shown for all iterations 1 through 4. The chart shows that the real burndown is significantly lower than the estimated burndown in the first two iterations, and the estimated burndown decreases steadily over the four iterations shown.

Iteration	Real Burndown	Est. Burndown
1	40	80
2	25	65
3		45
4		30
5		
6
