

Project retrospective

This is our message for the next (AMOS) generation. Good luck at first place. This course rules!

Always complete your tickets before the last day, and do not dive that deep into problems which are hard to solve. Focus on other tasks or new implementations, and ask someone to help you with the previous task.

The workflow and the tasks can be a bit confusing in the beginning but you will get used to it.

When designing a database, carefully consider the choice of the primary key. A bad one can seriously hinder your work.

Be aware of race conditions and think about the ways of solving them early on.

The role of PO can be a bit confusing in the beginning, especially writing user stories. But in case you have questions, always ask your Scrum Master or your teammates.
